

Alternate WebDAV Solution for Internet Explorer and Windows 2000 or Windows XP

If you are experiencing difficulty in Windows 2000 or Windows XP with the implementation of WebDAV through My Network Places and you use the Internet Explorer Web browser, here is a possible alternative solution.

Steps to Setup in your WebCT course

In your WebCT course (from the course HomePage), create an organizer page (might choose to name it "Instructor Only") and hide it from students. On that page, add an upper textblock in which you paste the following in the Text entry box. Click on update to save the organizer page changes.

```
<STYLE>
.ahref {behavior: url(#default#AnchorClick);}
</STYLE>

<A HREF = "https://webct.oit.umass.edu:443/dav/_COURSEID_/"
FOLDER = "https://webct.oit.umass.edu:443/dav/_COURSEID_/"
TARGET = "_blank" class="ahref">
<span class="action boldme">Open WebDAV to My-Files
</span></A>
```

How to Use Once Setup

Use Internet Explorer browser and log into your WebCT course. Click on the organizer page icon (Instructor Only), click on the link that is on the organizer page. A new Explorer window should open containing all of the files and folder that are in your My-Files for the current course.

As long as you have that window open, you should be able to drag & drop files from elsewhere on your computer into the My-Files or its subfolders. You can delete, or drag files/folder from the My-Files window to your computer as well.

Only works with Windows 2000 or Windows XP AND Internet Explorer 6.
