Discussion/Quiz questions to accompany Hulme et al., 2008

1. Name and describe two of the six principal pathways of invasion outlined in this paper.

2. Figure 1 shows typical invasion pathways broken down by taxonomic group. Choose one group (e.g., terrestrial vertebrates) and describe how it is similar/different from other groups.

3. Figure 2 defines pathways of invasion and gives examples of regulations that could reduce each pathway. Choose two example regulations and describe how they could reduce invasion risk.

4. Are invasive species likely to continue to be introduced in the future? Why or why not? (use evidence from the paper to support your argument)
