

*Hayride Wagon*

The running gear for this wagon was offered for sale on Craigslist. It was in terrible condition. Bent, broken, entirely covered in rust and crud, but I bought it anyway. I wirebrushed the running gear and painted it in Ford 8n red. The wheels were also wirebrushed and painted, but this time in Ford 8n Grey. Then I built and installed all the wooden parts. All the lumber that I used on this project was made from Red Pine trees that I cut down across the street. Chuck Foley again did the job of converting logs into lumber.
