

# ENTOMOL 697B: Field Research in Ecology

Instructor: Lynn Adler  
Class number: 39675  
Schedule: TBA

**Course Description:** Students will conduct individual research projects based on testing hypotheses from field observations. We will spend Aug 23-30 at Harvard Forest. During the semester, we will review the main types of data analysis used by ecologists and each student will present their project as a talk and paper. This class should provide a foundation for many of the skills of an organismal biologist.

Instructor permission required. Contact  
lsadler@ent.umass.edu.

Each student will be responsible for a paper and presentation based on their research and for peer-reviewing other's work.
