

### Homework 3(2)

5.  $A = \{1, 2, 3, 5, 6, 10, 15, 30\}$

(a)  $R = \{ \langle 1, 1 \rangle, \langle 1, 2 \rangle, \langle 1, 3 \rangle, \langle 1, 5 \rangle, \langle 1, 6 \rangle, \langle 1, 10 \rangle, \langle 1, 15 \rangle, \langle 1, 30 \rangle, \langle 2, 2 \rangle, \langle 2, 6 \rangle, \langle 2, 10 \rangle, \langle 2, 30 \rangle, \langle 3, 3 \rangle, \langle 3, 6 \rangle, \langle 3, 15 \rangle, \langle 3, 30 \rangle, \langle 5, 5 \rangle, \langle 5, 10 \rangle, \langle 5, 15 \rangle, \langle 5, 30 \rangle, \langle 6, 6 \rangle, \langle 6, 30 \rangle, \langle 10, 10 \rangle, \langle 10, 30 \rangle, \langle 15, 15 \rangle, \langle 15, 30 \rangle, \langle 30, 30 \rangle \}$

$R$  is reflexive, antisymmetric, transitive, and nonconnected. It is therefore a weak partial order.

(b) 1 is minimal (it isn't preceded by any other element) and least (it precedes every element); 30 is maximal (it isn't succeeded by any other element) and greatest (it succeeds every element):

(c)  $\wp(B) = \{ \emptyset, \{a\}, \{b\}, \{c\}, \{a, b\}, \{b, c\}, \{c, a\}, \{a, b, c\} \}$

$R = \{ \langle \emptyset, \emptyset \rangle, \langle \emptyset, \{a\} \rangle, \langle \emptyset, \{b\} \rangle, \langle \emptyset, \{c\} \rangle, \langle \emptyset, \{a, b\} \rangle, \langle \emptyset, \{b, c\} \rangle, \langle \emptyset, \{c, a\} \rangle, \langle \emptyset, \{a, b, c\} \rangle, \langle \{a\}, \{a\} \rangle, \langle \{a\}, \{a, b\} \rangle, \langle \{a\}, \{c, a\} \rangle, \langle \{a\}, \{a, b, c\} \rangle, \langle \{b\}, \{b\} \rangle, \langle \{b\}, \{a, b\} \rangle, \langle \{b\}, \{b, c\} \rangle, \langle \{b\}, \{a, b, c\} \rangle, \langle \{c\}, \{c\} \rangle, \langle \{c\}, \{b, c\} \rangle, \langle \{c\}, \{c, a\} \rangle, \langle \{c\}, \{a, b, c\} \rangle, \langle \{a, b\}, \{a, b\} \rangle, \langle \{a, b\}, \{a, b, c\} \rangle, \langle \{b, c\}, \{b, c\} \rangle, \langle \{b, c\}, \{a, b, c\} \rangle, \langle \{c, a\}, \{c, a\} \rangle, \langle \{c, a\}, \{a, b, c\} \rangle, \langle \{a, b, c\}, \{a, b, c\} \rangle \}$

$R$  is reflexive, antisymmetric, transitive, and nonconnected. It is therefore a weak partial order.

$\emptyset$  is minimal (it isn't preceded by any other element) and least (it precedes every element);  $\{a, b, c\}$  is maximal (it isn't succeeded by any other element) and greatest (it succeeds every element).

6.  $Linguistics\ grad\ students = \{Adam, Andries, Hosuk, Melissa, Minjoo\}$   
 $Year, Class = \{1^{st}\ year, 2^{nd}\ year, 3^{rd}\ year, 4^{th}\ year\}$

(a)  $f: Linguistics\ grad\ students \rightarrow Year, Class$

$\ker f = f^{-1} \circ f = \{ \langle Adam, Adam \rangle, \langle Andries, Andries \rangle, \langle Andries, Minjoo \rangle, \langle Hosuk, Hosuk \rangle, \langle Hosuk, Melissa \rangle, \langle Melissa, Melissa \rangle, \langle Minjoo, Minjoo \rangle \}$

(b) Quotient set

$Linguistics\ grad\ students / \ker f = \{ \{Adam\}, \{Andries, Minjoo\}, \{Hosuk, Melissa\} \}$

(c) Commutative diagram
