The Learning You

Researchers have defined “learning styles” using different terms. For the purpose of this survey, it will include your “style” of perceiving information (i.e. visual, verbal, tactile); your “style” of emotionally engaging information (i.e. sensing, intuiting); your “style” of acting on information (i.e. active, reflective); and your “style” of processing information (i.e. sequentially, globally). No matter the terminology used to describe the perceptual, affective, psychomotoric, or cognitive learning dimension, it is your volitional (conative) self that Portia Elliott theorizes must synchronize all these dimensions for learning to occur optimally (Elliott, 1986).

Richard Felder and Barbara Soloman of North Carolina State University have created a survey that will give you some insight into how “balanced” (synchronized) your mind is for learning. Click here is take this 44-item questionnaire and get immediate feedback on your [“Index of Learning Styles.”](#) When you finish this questionnaire to get back to his page you will need to close the browser window the questionnaire appears. You can do this by clicking on the “x” (close) button in the upper right corner (PC) or the “red dot” at the upper left corner (MAC). [Back to Surveys](#)
