

**Some Topics in Epistemic Value and Normativity**  
**Spring 2015**  
**Friday 1-4pm**

Sophie Horowitz  
sophie.horowitz@rice.edu

**Overview:**

This seminar will look at (mostly) contemporary work on epistemic normativity, and the role of value in epistemology. Is epistemic rationality importantly different from practical rationality, or is it a restricted kind of practical rationality? Should we understand epistemic rationality in consequentialist terms? Another important question lies at the heart of these debates: what is the relationship between epistemic rationality and truth? We probably won't answer any of these questions, but maybe we will make some progress.

Students enrolled for credit must write a final paper. Your grade will be determined by your grade on the paper. There are also three more necessary conditions to pass the class: attendance, one presentation during the semester, and a (brief) presentation of your final paper idea in the last class session.

**Presentation guidelines:**

Choose two papers to present during the course of the semester. The presenter should make a handout giving an overview of the relevant reading and lead discussion for part of that class meeting. Final paper presentations will work the same way.

**Paper guidelines:**

Your final paper can be on any topic we cover, or on any other relevant topic in epistemology (provided that you run it by me first). Aim for 20-25 pages double-spaced. I suggest that you look start thinking about this early on, and perhaps try to present on a topic that you are interested in writing about. If you're looking for more inspiration, I've listed a few extra papers in each topic at the end of this syllabus. However, it is not necessary to read anything beyond what we discuss. I will schedule meetings with you individually toward the end of the semester to discuss paper ideas.
