

The Cognitive Brain

Arnold Trehub

A Bradford Book
The MIT Press
Cambridge, Massachusetts
London, England

Contents

Acknowledgments	ix
Chapter 1	
Introduction	1
Chapter 2	
Neuronal Properties	19
Chapter 3	
Learning, Imagery, Tokens, and Types: The Synaptic Matrix	37
Chapter 4	
Modeling the World, Locating the Self, and Selective Attention: The Retinoid System	55
Chapter 5	
Accessory Circuits	79
Chapter 6	
Building a Semantic Network	99
Chapter 7	
Analysis and Representation of Object Relations	117
Chapter 8	
Composing Behavior: Registers for Plans and Actions	139
Chapter 9	
Set Point and Motive: The Formation and Resolution of Goals	153
Chapter 10	
Learning and Recalling Canonical Visual Patterns	169
Chapter 11	
Learning and Recalling Objects with Naturally Varying Shapes	189

Chapter 12	
Self-Directed Learning in a Complex Environment	201
Chapter 13	
Narrative Comprehension and Other Aspects of the Semantic Network	215
Chapter 14	
Illusions and Ambiguous Shapes: Epiphenomena of Brain Mechanisms	227
Chapter 15	
Other Experimental and Clinical Evidence	257
Chapter 16	
Overview and Reflections	287
Bibliography	307
Index	323

Acknowledgments

I am indebted to colleagues who read selected chapters of the manuscript and provided valuable criticism and comment, particularly Charles Clifton, David Rosenbaum, James Chumbley, Neil Stillings, Gordon Wyse, Alexander Pollatsek, Judith Kroll, and Keith Rayner. I also thank the many anonymous reviewers who made helpful comments. My greatest debt is to my wife, Elaine, whose unflagging support and assistance over many challenging years made this book possible.

Mind, n. A mysterious form of matter secreted by the brain. Its chief activity consists in the endeavor to ascertain its own nature, the futility of the attempt being due to the fact that it has nothing but itself to know itself with.

Ambrose Bierce, *The Devil's Dictionary*

The Brain is wider than the Sky
For put them side by side
The one the other will contain
With ease and You beside

Emily Dickinson
