

Table of Contents

Introduction

1. Why Biostatistics	3
2. Course Overview	9

Topic 1 - Summarizing Data

1. Scales of Measurement	2
2. Descriptives for Nominal and Ordinal Data	7
a. The Bar Chart	9
b. The Pie Chart	13
3. Descriptives for Continuous Data	14
a. The Histogram	15
b. The Frequency Polygon	19
c. The Cumulative Frequency Polygon	20
d. Percentiles (Quantiles)	21
e. Quantile Quantile Plot	22
f. Stem and Leaf Diagram	23
g. Box and Whisker Plot	24
4. The Summation Notation.....	25
5. Measures of Central Tendency	26
a. The mode	29
b. The mean	30
c. The median	33
6. Measures of Dispersion	35
a. Variance	36
b. Standard Deviation	37
c. Median Absolute Deviation from Median	39
d. Standard Deviation v Standard Error	40
e. A Feel for Sampling Distributions	42
f. The Coefficient of Variation	45
g. The Range	46

Topic 2 - Introduction to Probability

1. Why We Need Probability	2
2. Definition Probability Model	4
3. The “Equally Likely” Setting: Introduction to Probability Calculations	9
a. Sample space, Elementary Outcomes, Events.....	13
b. Types of Events	16
4. Conditional Probability	19
a. Theorem of Total Probability	23
b. Bayes Rule	25
5. A Simple Probability Model: The Bernoulli Distribution	27
6. Probability in Diagnostic Testing	29
a. Prevalence.....	29
b. Incidence	29
c. Sensitivity, Specificity	30
d. Predictive Value Positive, Negative Test	33
7. Probability and Measures of Association for the 2x2 Table.....	35
h. Risk	35
i. Odds	37
j. Relative Risk	37
k. Odds Ratio	41
Appendices	
1. Some Elementary Laws of Probability	44
2. Introduction to the Concept of Expected Value	47

Topic 3 - Populations and Samples

1. A Feeling for Populations v Samples	2
2. Target Populations, Sampled Populations, Sampling Frames	5
6. On Making Inferences from a Sample	8
7. Simple Random Sampling	10
8. Some Non-Probability Sampling Plans	13
9. Introduction to Probability Sampling	16
a. Sampling WITH v WITHOUT replacement	17
b. How to select a simple random sample	25
10. Some Other Probability Sampling Plans	28
a. Systematic	28
b. Stratified	30
C. Multi-stage	32
11. The Nationwide Inpatient Survey (NIS)	33

Topic 4 - The Bernoulli and Binomial Distributions

1. Review – What is a Discrete Probability Distribution.....	2
2. Statistical Expectation	4
3. The Population Variance is a Statistical Expectation	7
4. The Bernoulli Distribution	8
5. Introduction to Factorials and Combinatorials	11
6. The Binomial Distribution	14
7. Illustration of the Binomial Distribution	17
8. Resources for the Binomial Distribution	19

Topic 5 - The Normal Distribution

1. Introduction	3
2. Definition of the Normal Distribution	4
3. Sample Average is Often Normally Distributed Introduction to the Central Limit Theorem	7
4. A Feel for the Normal Distribution	10
5. The Relevance of the Normal Distribution	12
6. Calculation of Probabilities for the Normal(0,1)	13
7. From Normal(μ, σ^2) to Normal(0,1) – The Z-Score	19
8. From Normal(0,1) to Normal(μ, σ^2)	22

Topic 6 - Estimation

1. Introduction	2
2. Goals of Estimation	5
3. Some notation/definitions	7
4. How to Interpret a Confidence Interval	10
5. Normal: Confidence Interval for μ, σ^2 Known	17
6. Introduction to the Student's t-Distribution	22
7. Normal: Confidence Interval for μ, σ^2 Unknown	28
8. Introduction to the Chi Square Distribution	30
9. Normal: Confidence Interval for σ^2	36

continued

Topic 6 – Estimation continued

10. Normal Confidence Interval for $\mu_{\text{DIFFERENCE}}$ – Paired Data Setting	39
11. Normal: Confidence Interval for $[\mu_1 - \mu_2]$ – Two Independent Groups	44
12. Introduction to the F-Distribution	53
13. Normal: Confidence Interval for σ_1^2/σ_2^2	56
14. Binomial: Estimation of a Proportion π	59
15. Binomial: Confidence Interval for $[\pi_1 - \pi_2]$ – Two Ind. Groups	63
Appendix 1– Derivation of Confidence Interval for μ – Single Normal with σ^2 Known	66
Appendix 2– Derivation of Confidence Interval for σ^2 – Single Normal	69
Appendix 3 – SE of a Binomial Proportion	71

Topic 7 - Hypothesis Testing

1. The Logic of Hypothesis Testing	2
2. Beware the Statistical Hypothesis Test	15
3. Introduction to Type I, II Error and Statistical Power	18
4. Normal: Test for μ , σ^2 Known	24
5. Normal: Test for μ , σ^2 Unknown	27
6. Normal: Test for σ^2	30
7. Normal Test for $\mu_{\text{DIFFERENCE}}$ – Paired Data Setting	32
8. Normal: Test for $[\mu_1 - \mu_2]$ – Two Independent Groups	36

continued

Topic 7 - Hypothesis Testing continued

9. Normal: Test for Equality of Two Variances (σ_1^2/σ_2^2).....	42
10. Single Binomial: Test for Proportion π	45
11. Two Binomials: Test for [$\pi_1 - \pi_2$] – Two Ind. Groups	47
Appendix	
URL's for the Computation of Probabilities	51

Topic 8 - Chi Square Tests

1. Introduction to Contingency Tables	2
2. Relationship Between the Normal(0,1) and the Chi Square Distribution	9
3. Hypotheses of Independence or No Association	14
4. The Chi Square Test of No Association in an RxC Table	15

Topic 9 - Regression and Correlation

1. Definition of the Linear Regression Model	2
2. Estimation	10
3. The Analysis of Variance Table	20
4. Assumptions for the Straight Line Regression	24
5. Hypothesis Testing	27
6. Confidence Interval Estimation	35
7. Introduction to Correlation	39
8. Hypothesis Test for Correlation	42
